EDUCATION

Technological University of Dublin

B.S. in Computer Science International

Dublin, Leinster

Expected Graduation: May 2027

- **Related Coursework:** Data Structures & Algorithms, Postgres, Objects & Design, Computer Organization & Programming, Web Development, Object-Oriented Programming, Statistics & Applications, Mathematics

CFA Institute

Level I Chartered Financial Analyst Candidate

Exam: February 2027

- **Relevant topics:** Economics, Financial Statement Analysis, Corporate Finance, Quantitative Methods, Portfolio Management, Ethical & Professional Standards

EXPERIENCE

Currys PC World

Sales Assistant

Dublin, Blanchardstown

Sep 2024 – Present

- Personally, generating over €1,000,000 in sales since September 2024 with a UPT of 1.8, building customer rapport and recommending products suited to their needs and budget
- Using ChatGPT to research product comparisons and identify suitable in-stock alternatives when a customer's requested item wasn't sold in Ireland, helping convert sales that would otherwise have been lost
- Delivering technical support and troubleshooting across PCs, laptops, mobile devices and other electronics, applying root-cause problem-solving to resolve complex issues and build customer trust
- Maintaining up-to-date product knowledge — operating systems, Microsoft 365 and emerging technology trends — through Currys training and independent research, to give customers accurate, informed recommendations
- Handling sensitive customer information in line with GDPR requirements, having completed Currys' data protection and privacy training

PROJECTS

S&P 500 Order-Flow Trading Bot | Python, MCP, Alpaca API, Databento

- Directed an AI coding agent through a staged build of a reproducible research, replay and paper-trading system for an S&P 500 futures order-flow strategy, covering data ingestion from Databento, feature engineering and risk management
- Enforced a strict verification protocol on AI-authored strategy logic — rejecting an unverified AI-generated summary, requiring provenance for every rule, and labelling unproven interpretations as experimental, not fact
- Designed a leak-free research pipeline (deterministic replay, walk-forward validation, baseline comparisons) with a staged risk gate — offline replay → paper trading → live review — using MCP and the Alpaca API; live trading stays disabled pending approval

Stock Prediction Application | Python

- Developed a web-based Stock Prediction App using Streamlit for interactive user experience
- Integrated Yahoo Finance API for fetching historical stock data from 2015 to the present
- Designed time series forecasting using ARIMA models from PMDARIMA to predict stock trends
- Visualized historical and forecasted stock prices using Matplotlib, with dynamic stock selection and prediction period configuration via a slider

Sentiment Analysis Application | Python

- Built a Sentiment Analysis Application classifying Twitter messages as positive or negative with a Random Forest pipeline, using NLTK-based preprocessing and TF-IDF features (n-grams), evaluated on a held-out test set
- Pre-processed raw text (stop-word removal, punctuation and numeric stripping, NLTK lemmatization) and engineered TF-IDF features (supporting n-grams), evaluating classification performance on a held-out test set

ACHIEVEMENTS

Charity Football Tournament, Lead Organizer

August 2026

- Organized a 12-team, 120+ player charity football tournament for the Indian Family Club as lead organizer, raising €2,700 through team registration fees, incentivized by a cash prize for the winning team
